

## Enhancements in Datatel UI 4.4

### Full page view within the Report Browser. You can display one full vertical page of a report in the Report Browser without scrolling.

The default preference is to display the full page view, though you can override the preference using this option, and you can also change the preference from the **Options > Preferences** menu. The option that is last used in the Report Browser will be used the next time the Report Browser is displayed.

### Copy/paste improvements in forms.

You can cut, copy or paste text in any field on a UI form. Select the text and right-click to access these options, or use the standard keyboard shortcuts (Ctrl+X, Ctrl+C, and Ctrl+V).

### Form tables enhancement.

You can hover over tables in forms to view the page numbers instead of clicking in the tables.

The screenshot shows a table with columns: Vouchers Number, Date, Net, Status, and Check No/Date. The table contains four rows of data. A tooltip is visible over the table, showing 'Page 1 of 5' and a date '05/03/06', which is circled in green.

Vouchers Number	Date	Net	Status	Check No/Date
1 V0857297	05/03/06	113.95	Reconciled	01*0728681
2 V0776553	06/29/05	570.93	Reconciled	01*0659282
3 V0571273	06/19/03	65.95	Reconciled	01*0483920
4 V0442036	04/16/02	119.50	Reconciled	01*0374522

### Add form to Favorites in Search Results.

You can select and add forms to your Favorites in the Search Results panel.

The screenshot shows the 'SEARCH RESULTS' panel. At the top right, there is a star icon and a question mark icon, both circled in green. Below the icons is a table with columns: #, Name, Mnemonic, and Application. The table contains four rows of data.

#	Name	Mnemonic	Application
1	Aged AR Balance Report	AGBL	ST
2	AR Balance by AR Code	ABCO	ST
3	AR Balance by AR Type	ABTY	ST
4	AR Invoice Balance Detail	ARBD	ST

### Support for screen reader software.

There are many improvements within UI to provide support for screen reader software, such as JAWS.

### Select All option enhancement in Search Results.

In the Search Results panel, you can now first select all records and then clear individual records to include only the records that you want. (This option is not available for searches that require a single selection.)
